# Update Log

- 29/01/2020: release first version of this slide

# Objective

- **WildFly Swarm** is a complete teardown of the WildFly application server into bite-sized, reusable components called fractions that can be assembled and formed into a microservice application that leverages Java EE APIs
- Assembling these fractions is as simple as including a dependency in your Java Maven (or Gradle) build file, and WildFly Swarm takes care of the rest
